WESTERN DIVISION

2005 AUG -3 PM 3: 06

THOMAS M. GOULD
CLERK, U.S. DISTRICT COURT
W/D OF TN, MEMPHIS

UNITED STATES OF AMERICA

VS.

EDDIE JETER,

Defendant.

MOTION GRANTED

JON PHIPPS MCALLEN
U.S. DISTRICT JUDGE
3 2005 Nos. 97-20234-41 and
DATE 05-20014THOMAS M. GOULD
CLERK, U.S. DISTRICT COURT
W/D OF TN, MEMPHIS

MOTION REQUESTING EXTENSION OF TIME TO SURRENDER

COMES NOW your Defendant, EDDIE JETER, by and through his Attorney of Record, Jake Erwin, and would respectfully request this Honorable Court to extend the date for your Defendant to surrender to the Bureau of Prisons. In support of this motion, your Defendant would respectfully submit the following:

1. Defendant would submit that he was to have undergone surgery to remove one of his eyes in early July. Prior to having this surgery it was discovered that he had two significant arterial blockages. On July 7, 2005, Defendant was hospitalized and received two arterial stents.
2. Defendant is presently recovering, but has been advised that more surgery may be likely due to lack of improvement.
3. Moreover, Defendant is still in need of the eye surgery.
4. Defendant requests at least 30 additional days to surrender so that he may continue his recovery, to determine whether more heart surgery is necessary, and whether he will have his eye surgery.
5. Attached hereto is Defendant's current medical records.

6. Counsel has consulted with Assistant United States Attorney Carol Andre, who has advised that he has no objection to the request.

WHEREFORE, PREMISES CONSIDERED, your Defendant respectfully requests this Honorable Court to extend the time for which your Defendant should surrender.

RESPECTFULLY SUBMITTED,

Jake E. Erwin #020728
THE WAGERMAN LAW FIRM
Suite 1313, 200 Jefferson Avenue

DATE OF ADMISSION: 07/07/2005

DATE OF CATHETERIZATION: 07/07/2005

PROCEDURE:

PTCA and intracoronary stent to proximal 90% left anterior descending artery stenosis.

REFERRING PHYSICIAN: Leona Miller, M.D.

EQUIPMENT:

1. 8-French JL4 guiding catheter.
2. Whisper 0.014 wire.
3. 3.5 x 24-mm long TAXUS drug-eluting stent.

PROCEDURE: After risks and benefits of procedure were extensively explained to the patient and family in detail and informed consent was signed, the patient was brought to the cardiac catheterization laboratory.

The patient's right groin was prepped and draped in the usual sterile fashion. Right femoral artery was cannulated with modified Seldinger technique and an 8-French introducer sheath was positioned into the right femoral artery. An 8-French JL4 guiding catheter was advanced. The left main coronary ostium was engaged. Guiding views were obtained. The patient was given Angiomax bolus and started on Angiomax drip. Whisper 0.014 wire was shaped and advanced through the guiding catheter. Wire was positioned into the distal LAD. There was some ostial stenosis of a small diagonal branch. A 3.5 x 24-mm long TAXUS drug-eluting stent was prepped and advanced over the wire. Stent was positioned at the area of stenosis. Stent was successfully deployed at 18 atmospheres. Balloon was pulled out. Views were obtained. There was good antegrade flow with no residual and no dissection. There was some compromise of flow into the small diagonal branch; however, the inflow got established.

Wire was redirected into the diagonal branch, unable to cross it. Decision was made since the flow was established and it's a small

diagonal branch not to proceed further because of inability to cross the wire at the ostium of the diagonal. There was good antegrade flow into the LAD. There was some mild 40% stenosis in the distal LAD near the apex. Decision was made not to deploy any stent over there.

The patient was given Integrilin bolus and was started on Integrilin drip.

CONCLUSION: Successful percutaneous transluminal coronary angioplasty (PTCA) and drug-eluting stent to 90% proximal left anterior descending (LAD) stenosis.
